Concepts

- Jupyter Notebook is much more complex than a code editor. Jupyter allows us to do the following:
 - Type and execute code
 - Add accompanying text to our code (including math equations)
 - Add visualizations
- Jupyter can run in a browser, and we often use it to create compelling data science projects that we can easily share with other people.
- A notebook is a file created using Jupyter notebooks. We can easily share and distribute notebooks so people can view our work.
- Types of modes in Jupyter:
 - Jupyter is in edit mode whenever we type in a cell — a small pencil icon appears to the right of the menu bar.
 - Jupyter is in function mode whenever we press Esc or whenever we click outside of the cell — the pencil to the right of the menu bar disappears.
